HUMAN-CENTERED TECHNOLOGY & SYSTEMS

UX Analysis | Quality Assurance | Workflow Design | Civic Technology

Computer science student and frontline service professional who investigates how digital systems work for the people who depend on them. Translates observed behavior into requirements, usability and risk analysis, acceptance criteria, and clear documentation. Builds and evaluates worker- and public-service-focused projects using web technologies and AI-assisted tools, with attention to accessibility, privacy, data quality, and maintainable workflows.

SELECTED PROJECTS

ShiftRight | Product Concept, AI-Assisted Prototyping & QA

Independent Project

- Defined a worker-centered product concept and shaped its web application, mobile-first direction, content, and data structure with AI-assisted development tools.
- Identified and verified a privacy correction; checked CI installation, linting, production build, a controlled guest journey, and 10 synthetic workbook calculations while documenting tested and untested areas.

Public-Benefits Application | Civic Technology QA

Independent Case Study

Investigation

- Investigated three material issues in a Georgia public-benefits workflow involving evidence mapping, document data extraction, and cross-field validation.
- Created expected-versus-actual defect records with user-impact analysis, privacy boundaries, acceptance criteria, and verification recommendations without overstating internal causes.

Tana Organization | Information Architecture & Workflow

Independent Project

Design

- Designed a knowledge-management workflow around observed capture, processing, retrieval, and action behaviors; translated recurring friction into requirements, information states, and retrieval paths.
- Evaluated automation and maintainability tradeoffs, documented constraints and privacy boundaries, and refined the system through continued use.

CORE SKILLS

Human-centered systems: User advocacy, usability analysis, user-impact assessment, information architecture, workflow design, accessibility awareness

Quality and research: Exploratory testing, expected-versus-actual analysis, defect documentation, requirements, acceptance criteria, risk assessment, synthetic test data

Technology: HTML, CSS, JavaScript, responsive design, DOM manipulation, API and single-page application concepts, GitHub, GitHub Actions, AI-assisted development tools

Operations and communication: Process documentation, training, customer support, privacy-aware judgment, Google Workspace, Microsoft Office

PROFESSIONAL EXPERIENCE

Server / Bartender | Texas Roadhouse, Kingsland, GA

Dec 2025-Present

- Guide customers through ordering and payment, resolve concerns, protect privacy at customer-facing devices, and coordinate solutions with coworkers and managers.
- Identified a recurring mismatch between physical beverage inventory and point-of-sale availability and established a start-of-shift verification practice with managers.

Server / Bartender / Trainer | LongHorn Steakhouse, Kingsland, GA

2020-Dec 2025

- Trained employees through written guidance, job shadowing, guided practice, and transition support; verified closing work and managed shared cash responsibilities while serving customers.

EDUCATION

Bachelor of Science in Computer Science, In Progress |

University of the People

Relevant work: responsive multi-page website using HTML and CSS; JavaScript temperature converter with input validation, conditional logic, event handling, calculations, and DOM updates.
